Subject: FW: Gunderson Area 3 Riverbank Draft Source Control FS Work Plan
Attachments: DRAFT Area 3 SC FS WP - Revised II.pdf

All,

DEQ recently received a draft feasibility study work plan for the upstream portion (Area 3; also referred to as "Schnitzer ASD Yard" in reports) of the Gunderson riverbank (attached). It is DEQ's intention to work with Gunderson to conduct a FS for the Area 3 riverbank which will evaluate final remedial alternatives for this portion of the site and will also address riverbank source control issues. The Area 3 riverbank is heavily impacted with waste/debris from former ship dismantling and car shredding operations that occurred in this area of the site. Bank contaminants include PCBs, metals, etc. Given that DEQ considers the Area 3 riverbank a significant source, we wanted to inform the Government Team that we are starting the FS phase and provide opportunity for input. My apologies for not discussing this during the TCT last week, but I was not aware of it.

DEQ is looking for review comments on the draft plan by Wednesday October 16th. Please direct review comments to the DEQ PM, Shawn Rapp Rapp.Shawn@deq.state.or.us and copy me. Also, let Shawn know if you want a copy of the Area 3 riverbank source control evaluation.

In addition, DEQ is expecting a draft focused feasibility study for the Area 2 (central) portion of the Gunderson riverbank in the next couple of weeks. Once this document is received, DEQ will make copies available and identify the review schedule. Let me know if you have any questions.
